Where should Danone expand next?

Sustainable Nutrition Market Intelligence: finding markets where nutrition impact, commercial potential and environmental sustainability line up.

Lucas Le · University of Glasgow · Graded A

Growth and responsibility pull in different directions

150.2M

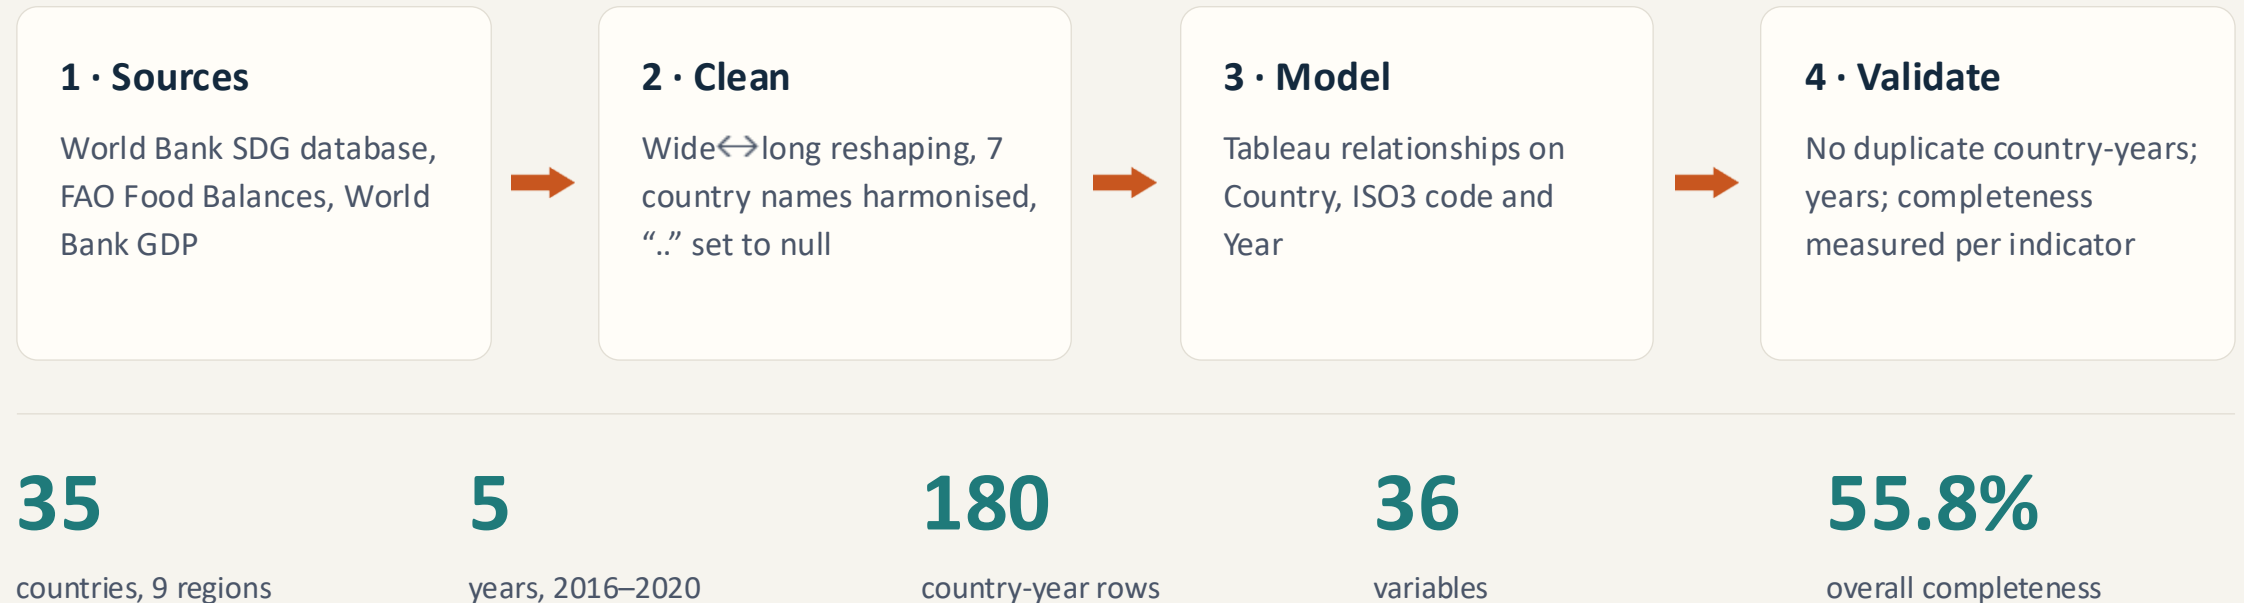

children under five are stunted worldwide: a large, urgent urgent need for affordable nutrition.

70%

of allowable greenhouse-gas emissions by 2050 are projected projected to come from agriculture, putting dairy under ESG under ESG pressure.

The question: how can Danone systematically find markets where dairy nutrition delivers the most social impact, while staying commercially viable and environmentally sustainable?

Three open sources, one clean model

Low completeness in nutrition surveys (about 40%) makes this a screening tool, not an operational plan

One index to rank markets, six pages to explain it

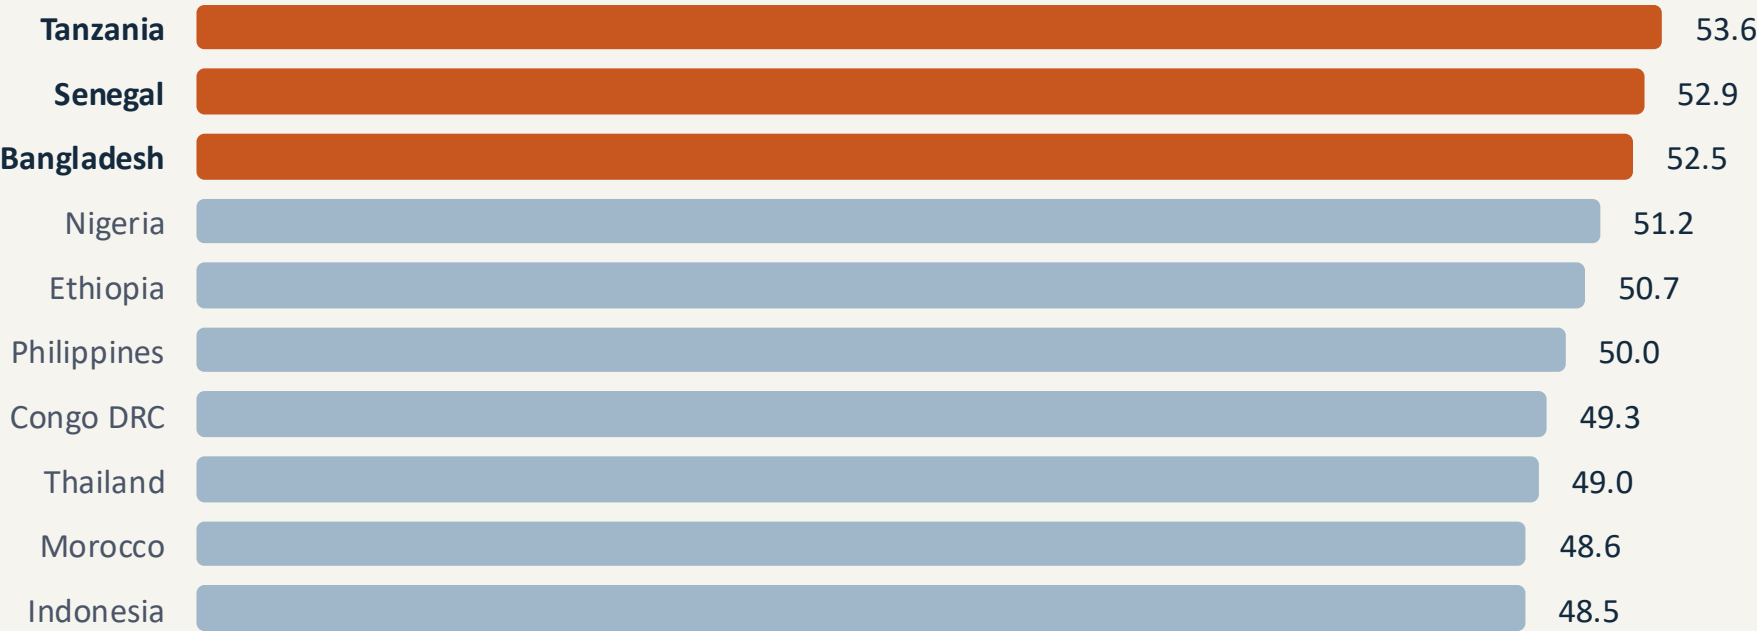

Sustainable Nutrition Opportunity Index

45%	Malnutrition severity: need (SDG 2)
30%	Dairy consumption gap: market headroom
25%	Low resource dependency: sustainability (SDG 12)

Dashboard storyline

- 1 **Where to look?** Opportunity map and Top 10
- 2–4 **Why these markets?** Need, dairy gap, supply chains chains
- 5 **What could go wrong?** Resource dependency risk
- 6 **How to prioritise?** 2×2 strategy matrix

Tanzania, Senegal and Bangladesh lead the ranking

Sustainable Nutrition Opportunity Index, 2016–2020 average (0–100). Top 3 highlighted.

Malnutrition is worsening where it is already worst

Malnutrition Severity Index leaders: **Congo DRC (16.9)**, **Nigeria (15.2)**, **Tanzania (14.4)**. Bangladesh, the Philippines and Senegal improved, but fragile states went backwards.

Congo DRC

39.9 → 41.7%

undernourishment, 2016 → 2019

Ethiopia

13.8 → 16.2%

undernourishment, 2016 → 2019

Nigeria

9.4 → 14.6%

undernourishment, 2016 → 2019

Priority markets drink a fraction of Europe's dairy

Milk consumption (kg per person per year)

United Kingdom

United States

Tanzania

30

Senegal

17

Nigeria

7

1.4 g

dairy protein per person per day in Indonesia,
against a sample average of about 10 g.

Three paradoxes that change the strategy

Distribution paradox

119 kg · 38%

Pakistan consumes plenty of milk yet 38% of children are stunted. The gap is distribution and fortification, not supply.

Governance paradox

6% stunting

Turkey has only moderate farm productivity but low stunting, helped by social assistance. Institutions matter more than farm capacity.

Resource curse

81.6 vs 1.0

Sustainability risk: Congo DRC, forest and mineral dependent, versus Bangladesh Bangladesh with 28% net savings.

A 2×2 matrix turns 35 countries into four playbooks

Nutrition Focus • wave 1

Stunting $\geq$ 25% • resource rents $<$ 6% of GDP

Bangladesh, India, Indonesia, Pakistan, Philippines, Tanzania

Affordable fortified dairy for under-fives through existing supply chains supply chains

Critical Opportunity • wave 2

Stunting $\geq$ 25% • resource rents $\geq$ 6%

Congo DRC, Ethiopia, Nigeria

Partnership-led entry with development finance and smallholder smallholder cooperatives

Sustainable Transition

Stunting $<$ 25% • resource rents $\geq$ 2%

Senegal, Vietnam, South Africa, Morocco and 4 more

Targeted nutrition products while tracking economic diversification

Premium Markets

Stunting $<$ 25% • resource rents $<$ 2%

China, Thailand, Turkey, Germany, United States

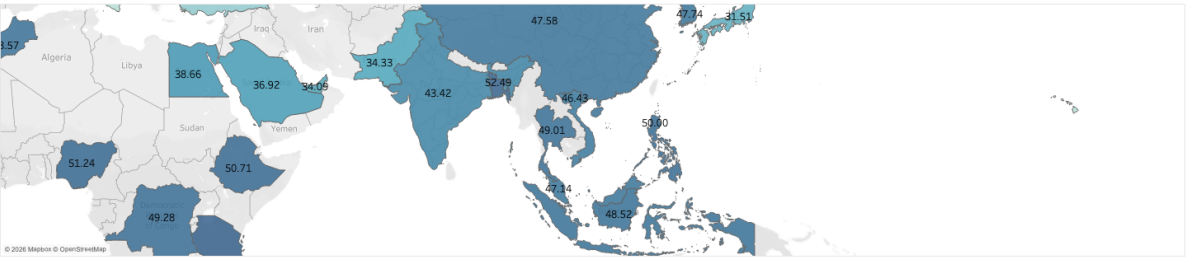

Premium and functional dairy, innovation testing

1. Executive Summary

Sustainable Nutrition Opportunity Index

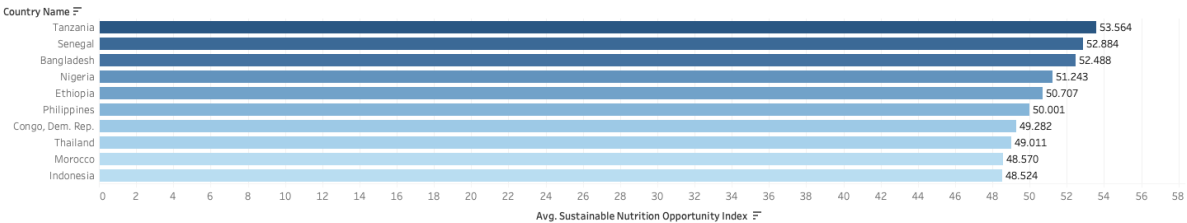

- 1. Malnutrition Severity Index (45% weight)
- 2. Dairy Consumption Gap (30% weight)
- 3. Resource Sustainability (25% weight)

KPI Cards With SDG Goals

SDG Label	SDG Description	Total Country	Av Child Stunting Rate	Resource Dependency Risk	Avg. Sustainable Nutrition Opportunity Index
UN SDG Goals	1. Zero Hunger 2. Responsible Consumption	35	21.08	36.53	37.10

Top 10 Priority Markets by Sustainable Opportunity Index

What the analysis cannot claim

Averages hide inequality

National figures mask urban–rural gaps, so priority markets need sub-national analysis next.

The index has a commercial bias

Congo DRC has the highest need but ranks 7th, because resource risk lowers its score.

Data gaps are not random

Only 40% of nutrition data exists; the weakest statistical systems often have the worst malnutrition.

Validation matters

A later review found GDP rows for the Republic of the Congo in place of in place of DR Congo; the source file has been corrected.
